

ASHA Healthcare Access & Intelligence Platform

Provider Revenue Model and Workflow

1 Overview

The ASHA platform is an offline-first, AI-enabled healthcare intelligence system designed to empower ASHA workers to identify, prioritize, and manage high-risk individuals in rural populations. The system integrates data collection, machine learning-based risk classification, and structured healthcare access workflows.

The platform acts as:

- A healthcare access layer
- A data intelligence system
- A workflow orchestration engine

2 Population Funnel Analysis

Each ASHA worker typically covers a population of approximately 1000 individuals.

Stage	Percentage	Estimated Count
Total Population	100%	1000
High-Risk Identified	10–12%	100–120
Referral Eligible	~30% of high-risk	30–36

3 Disease Categorization

Referred individuals are categorized into three major groups:

Category	Description	Share
Terminal / Critical	Severe and urgent care cases	10–15%
Generic / Chronic	Diabetes, hypertension, etc.	50–60%
Communicable	Infectious diseases	25–35%

4 Revenue Model Structure

4.1 1. Subscription Model

Healthcare providers pay a recurring fee for platform access.

Provider Type	Monthly Pricing (INR)
Small Clinics	10,000 – 25,000
Mid-sized Hospitals	50,000 – 1,00,000
District-Level Systems	2,00,000+

4.2 2. Data Access Model

Aggregated and anonymized datasets are provided to healthcare providers.

Data Type	Pricing (INR)
Monthly Dataset Access	50,000 – 2,00,000
Disease-Specific Insights	25,000 – 1,00,000
Population Analytics	1,00,000+

4.3 3. Service Enablement Model

Revenue is generated through usage of system capabilities:

- Triage engine
- Routing system
- Case workflow tracking

4.4 4. Program-Based Revenue

- Critical care identification programs (terminal cases)

- Chronic disease management programs
- Communicable disease intervention programs (kits, screening)

5 ASHA Incentive Model

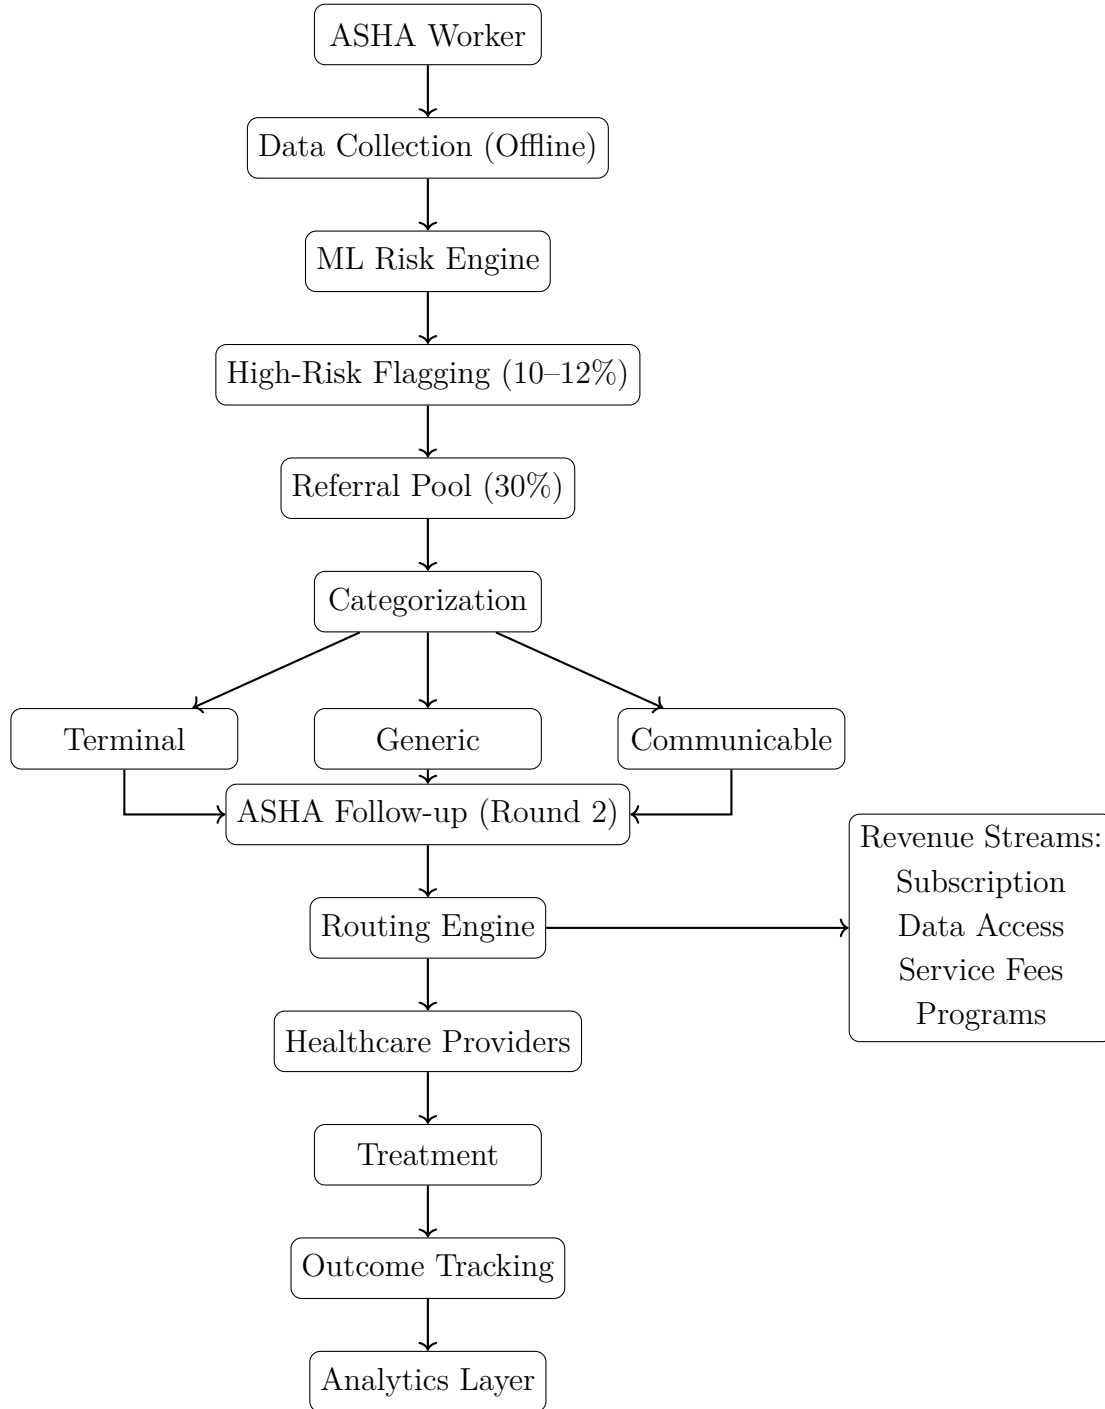

The incentive structure is designed to reward outcomes rather than referrals.

Action	Incentive Type
Correct Risk Identification	Performance-based
Follow-up Completion	Performance-based
Case Progression	Performance-based
Case Closure	Outcome-based

6 Compliance Positioning

The platform is positioned as a healthcare access and intelligence system rather than a referral commission system. Revenue is derived from services, analytics, and workflow enablement rather than per-patient commissions.

7 Workflow Diagram

8 Conclusion

The ASHA platform establishes a scalable, compliant, and impact-driven healthcare access system by integrating frontline data collection, AI-driven prioritization, and structured provider engagement. The revenue model ensures sustainability while maintaining alignment with public health objectives and ethical constraints.
